BERRY PLANTS

THE NEW MAMMOTH EVERBEARING
STREAMLINER STRAWBERRY

(See Page 3)

BRENTWOOD BERRY GARDENS

140 S. Carmelina Avenue :: Los Angeles 24, Calif.

STRAWBERRY PLANTS

**We are Exclusive Agent West of the Rockies for
MULLINS PLANT FARMS, Chattanooga, Tennessee**

Mr. Mullins is County Agricultural Agent at Chattanooga, and had the help of the Tennessee College of Agriculture in securing the best plant stock that it was possible to find. East Tennessee is said by leading nurserymen and plant authorities to produce the best strawberry plants in the nation, and the Mullins plants have been pronounced by a leading plant pathologist to be the best to be had.

Mr. Mullins carefully rogues his plants, watching his fields for off type or inferior plants which are taken out, and selecting extra choice plants that he finds for propagation to improve the strain. His plants are grown on virgin soil and are free from disease and insect pests, and he exercises great care to have his plants true to name.

Late in September he wrote: "The Klondike, Blakemore, Brightmore, Marshall and Sierra are looking extra good at the present time. The Klondike are the nicest I've ever seen."

CHOOSE THESE PLANTS AND BE SURE OF GETTING THE BEST

Some varieties of strawberries and caneberries are in very limited supply. ORDER NOW, before this stock is all booked, after which prices will either advance or there will be no more of the variety to be had.

YOU ARE URGED TO PLANT EARLY, AS EARLY PLANTING GIVES SO MUCH BETTER RESULTS THAN LATE PLANTING

What nurseries say:

Oakland: "We were well pleased with stock purchased from you during the past two years, and would like to place our order for coming fall and winter with you."

Camarillo: "We were well pleased with your handling of our order last year and we know that we can depend on you to give us the same quality of stock that we have received in past years."

Auburn: "We like your stock and service." They got Boysenberries and Youngberries.

BRENTWOOD BERRY GARDENS

140 S. Carmelina Ave., Telephone ARizona 9-3496

Los Angeles 24, California

We exercise the greatest care to keep our varieties pure and true to name, and hold ourselves in readiness at all times to replace on proper proof all stock that may prove otherwise or refund the amount paid, but it is mutually agreed between the purchaser and ourselves that we shall not be liable for any amount greater than the original price.

STREAMLINER STRAWBERRY

Everbearing

This outstanding new everbearer originated in the mountains of northeastern Oregon at an elevation of 3000 feet where it gets very cold, so it is very hardy. The berries are extremely large and hold their size well throughout the season; conical, almost round in shape, attractive, deep, glossy red in color both fresh and preserved, very sweet, requiring very little sugar, delicious in flavor and highly aromatic. It is remarkably productive and very firm, making it a good shipper and standing up on the market better than other everbearers.

It makes a good fruiting bed and the runner plants yield a good crop the year plants are set. Its spring crop is said to compare favorably with leading standard varieties, and it continues to produce until frost. It is said to be the most disease-free plant known, patches four years old being in perfect condition, free of disease and in full production.

Leading growers who have thoroughly tested Streamliner declare it to be the best of all the everbearers. It is excellent for eating fresh, and being firm and a rich red color throughout is highly desirable for canning and quick freezing.

See photo on cover.

WHAT GROWERS SAY:

Edward A. Biery, La Mesa: "We have been MOST HAPPY with the STREAMLINER STRAWBERRY plants you sold us last January. It has been a great joy to see them produce so quickly and such glorious size berries . . . When is the best time to place order for these plants? We have some inquiring friends."

R. W. Isbill, Acampo: "I purchased 1000 Streamliner strawberry plants (from you) last year and am very well satisfied with them. They are the best all-round berries I ever raised and yield as good. They are very large in size. The color and flavor are excellent. They have good aroma and are as firm as the average strawberry.

"We have had a lot of compliments from people who have bought our Streamliner berries. We are picking more berries at present than we have at any time this summer." Dated Oct. 3. Mr. Isbill has ordered 5,000 more of these plants for this season.

Cy Ramage, Chula Vista: "The Streamliners have done the best for us and right now (Oct. 5) are covered with blossoms and berries of all sizes. When ripe they are very large and bright and have a wonderful color." In saying "have done the best" he is comparing them with Gemzata; see what he says of Gemzata after GEMZATA item below.

(See Prices on Page 19)

GEMZATA STRAWBERRY

Everbearing

This variety is a cross between Gem and Wayzata and is considered second only to Streamliner, and is so similar to Streamliner in size and shape that the photo of Streamliner on cover might well be of Gemzata.

It is said to be an outstanding everbearer for both bright quality and heavy fruit production throughout the summer and fall of extra large berries, right up to heavy frost. The berries are unusually large with rich, red meat all the way through, firm and of fine texture. Gemzata has proven successful on a wide range of soils and succeeds better than other everbearers tested under adverse conditions.

University and State Experimental results show it to be superior to Gem and Mastodon in both quality and production and it produces well the first season.

Mr. Ramage says: "Our Gemzata plants were planted latest and some of them did not do so well as it was quite hot when transplanted. The berries are large and fine flavored and if planted sooner would have been as good as the Streamliner." (See what he says about Streamliner above.)

ROCKHILL STRAWBERRY

Everbearing

This is a runnerless variety, seldom making runners. A grower wrote us that out of 70,000 plants he had only 500 runner plants. It is popular on this Coast, productive, with large red berries of a very delicious flavor. It produces a full crop the same year as planted. It makes large crowns and being practically runnerless is propagated by crown divisions. For this reason the price of plants remains high.

Mr. Hill, author of the Strawberry Wall Manual, told us early in October that so far Rockhill had done the best of the varieties on his wall. He got nearly all his plants from us.

(See Prices on Page 19)

GEM STRAWBERRY

Everbearing

This is an excellent berry and does well in California as well as elsewhere. It has a good red color, good size and excellent flavor, bearing a heavy early crop of beautiful, firm berries and continuing to produce up to frost.

MASTODON STRAWBERRY

Everbearing

Mastodon has for years been a popular berry, especially in the East, as well as on this Coast. It produces a good crop the summer and fall of the year planted, and the following spring yields a crop equal to many spring varieties.

EVERMORE STRAWBERRY

Everbearing

Introduced under name of Minnesota 1166. Vigorous grower, making a good fruiting row, with large, attractive berries throughout summer and fall with a heavy crop the following spring. The flavor is not so good as some varieties.

PROGRESSIVE STRAWBERRY

Everbearing

This is one of the oldest everbearers, and on this Coast especially is grown principally in home gardens. It does best at the higher elevations or in the northern part of the state in California.

(See Prices on Page 19)

KLONDIKE STRAWBERRY

This has been the leading commercial strawberry in Southern California for many years. It is a large, red berry of good flavor though somewhat acid, quite productive, good shipper and sells well on the market.

Mr. Mullins wrote late in September: "Our Klondikes are the nicest I have ever seen."

Cy Ramage of Chula Vista wrote Oct. 5: "We have about seven acres of Klondikes and they are the finest in this territory. All our plants came from you and they are very good and free from disease."

KLONMORE STRAWBERRY

An outstanding new variety which originated at the Louisiana Experiment Station, a cross between Klondike and Blakemore. Julian C. Miller, Head of Horticultural Research at this Station, says of Klonmore:

"The Klonmore has, in most cases, outyielded the Klondike. The big advantage Klonmore has over Klondike is that the Klonmore is resistant to leaf spot and scorch and our growers do not have to spray to keep these diseases under control.

"The Klonmore is about 20% sweeter and therefore having a higher solids content than Klondike. Being a sweeter berry makes it more desirable for the fresh market. The Klonmore produces berries earlier as well as later than the Klondike. In most of our comparisons, the Klonmore produced 10% to 20% higher yields.

"I planted the Klonmore here at this station and it was released in 1940. I made the first cross in 1933 between the Klondike and Blakemore."

Commercial growers especially should try this new variety out alongside Klondike and other varieties, as it may prove superior here as well as in Louisiana and prove more profitable. It has become very popular with Louisiana growers.

BLAKEMORE STRAWBERRY

This is an early berry, bright, light red to the center. The color does not change on standing nor when canned. It is a great favorite with canneries and is excellent for quick freeze. Being very firm, it is one of the best of all for shipping. A California grower says it yields better than Klondike and over a longer period, being both earlier and later, is firmer and a better shipper than Klondike. 99% of the acreage in Arkansas is now said to be Blakemore where Klondike used to be the leading berry.

(See Prices on Page 19)

BRIGHTMORE STRAWBERRY

Bulletin 416, of the Agricultural Experiment Station, Oregon State College, Corvallis, says: "The BRIGHTMORE strawberry was named and introduced in 1942. In tests it has outyielded other varieties under most conditions at Puyallup and Prosser, Washington, and at Hood River, Oregon. It has been productive except on the heaviest soils. It is a firm, bright-red variety especially well adapted for freezing and preserving. Preserves made from Brightmore have been superior to those made from Marshall even though the fresh-fruit flavor of Brightmore is not so high as that of Mashall."

The color is between Blakemore and Marshall and they are remarkably bright and glossy, and are firm and sweet, and it is said to be very resistant to mold, more so than other varieties, and free from crinkle and yellows.

A Field of Strawberries

MARSHALL STRAWBERRY

The **Marshall**, **Banner**, **Oregon Plum** and **New Oregon** are said by authorities and growers to be the same variety. This berry is very popular and extensively grown in the Pacific Northwest and Northern California. It has a beautiful red color and a very delicious flavor and is very prolific and a good cropper. Extensively used for canning and quick freezing.

FAIRFAX STRAWBERRY

This is a berry of outstanding quality and wonderful flavor, of dark red color, firm and unusually fine shipper. A favorite for home, roadside stand and commercial use, it is a vigorous growing plant, with fruit that ripens midseason over a long picking season.

(See Prices on Page 19)

MISSIONARY STRAWBERRY

This variety is sometimes called CAROLINA and on the Los Angeles market is known as "MISSION". It has long been a commercial variety in Southern California and is a little earlier than Klondike on light soil.

AROMA STRAWBERRY

This is a late variety, large, very productive and a good shipper. Its first crop comes in at about the end of the first Klondike crop, thus filling in the gap between Klondike's crops. Has been a successful commercial berry in Southern California for many years.

PREMIER STRAWBERRY

Premier has long been a standard variety in the East. Very early, it is said to be a great money maker with its early crop of berries, bringing top prices. Said to be very healthy and deep rooted, an excellent producer of large, bright red berries of firm texture.

DUNLAP STRAWBERRY

An old standby variety, still extensively planted in the East and regarded as one of the finest of strawberries. Berries of medium size, dark red and pointed in shape, highly flavored and ideal for canning. Plants said to be vigorous and tremendous yielders and resisting drouth and cold weather better than most varieties.

COLEMAN'S PRESIDENT STRAWBERRY

This new variety originated in Washington, where it is said to be in great demand for quick freezing, one processing firm, it is said, having contracted for 500,000 of the plants to distribute to its contract growers.

Processors want a berry which, after freezing, will thaw out and be as much like a garden-fresh berry as possible. The new Coleman's President is said to meet these requirements better than any other berry on the market. After thawing it is said to be solid and firm, has a good color, and maintains its original sweetness and flavor. Shrinkage is practically nil, either from freezing or canning.

We saw these berries growing at Fresno last spring, and the plants were simply loaded with blossoms and berries of all sizes from blossoms up to ripe berries. Mr. Sutton, the grower, writes that the main first crop lasted seven weeks, and they took off four tons from $\frac{3}{4}$ acre, equal to 1000 trays of 12 baskets each.

A Fresno man who bought four crates of these berries from Mr. Sutton for home freezing, wrote him: "We opened some of your frozen berries we have in the sharp room, and the RICH, SWEET FLAVOR, TASTE AND FIRM QUALITY COLEMAN'S PRESIDENT STRAWBERRIES HAVE, JUST CANNOT BE BEATEN."

Mr. Sutton wrote that they got 50c per tray over the market for these berries in Fresno.

(See Prices on Page 19)

CATSKILL STRAWBERRY

A very large, bright glossy red berry, firm and good shipper. Consistently good yields and large size have earned it a wide reputation in the East as a midseason money maker. As frost resistant as Premier, it has always made a crop, and it thrives on practically all soils.

SIERRA STRAWBERRY

Considered the best of the new U. of C. varieties for the foothill region. The variety is late and at times produces most of the spring crop late enough to escape the rains that often spoil the early crop. It is a very good plant maker and has fair longevity compared with other varieties. Color, medium red usually, with good gloss, which gives a good appearance; this holds well after picking. Berries large to medium, and the dessert quality is good, with slight aroma.

SUNRISE RED RASPBERRY

This is an exceptionally early berry, large in size, very hardy and very resistant to disease. Said to be two or three weeks earlier than Cuthbert, but the season ends about with Cuthbert. In color, flavor and dessert quality they are said to be so much alike that it would be hard to tell them apart. A Santa Monica grower said they produced up to Christmas.

(See Prices on Page 19)

WASHINGTON RED RASPBERRY

This outstanding variety originated in Washington. The berries are slightly larger than Cuthbert and have a marvelously delicious flavor, being sweet and delicately flavored and lacking the slight bitterness sometimes noticed in Cuthbert. Resembles Cuthbert in appearance, but is firmer and a shade lighter red, and a little earlier than Cuthbert. The harvest lasts several days after the Cuthbert harvest has ended, and the yield is exceptionally heavy. Unlike Cuthbert, it is unusually hardy, and not subject to winter kill. Has won high praise from growers in different parts of California, where it is said to yield as well as Cuthbert which has long been the main crop raspberry here. Used extensively by quick freezing plants.

WILLAMETTE RED RASPBERRY

This unusually fine berry originated at the Oregon State College at Corvallis. We have found this raspberry to have a wonderful flavor, meaty, juicy and very large, being said to be the largest red raspberry. The berries are unusually firm and hold up well on standing, as well as after canning and freezing. The season is early and long and the yield is very heavy, an Oregon grower saying it far outyields the Washington. At Oregon State Experiment Station it outyielded three other leading varieties.

CUTHBERT RED RASPBERRY

This berry has often been called "Cassberry" here and has long been the main crop red raspberry here. It is of good size, good color, good flavor, good raspberry aroma, fairly firm and a fairly good shipper.

INDIAN SUMMER RED RASPBERRY

Like one of its parents, the Lloyd George, this berry bears two crops, a spring or summer crop and a fall crop. The quality is good and the season very early. The plants are vigorous, upright, hardy, healthy and productive. The fruit is large, juicy, tender, mild subacid. Not subject to mosaic disease and is extremely hardy, even in Canada. A grower in this county got a few of these plants two years ago and in the fall phoned me that they were wonderful, saying they had grown large and branched out and had a fine crop of large, wonderful, delicious berries, and he wanted 200 or 250 more; when I got them in he took 500.

LLOYD GEORGE RED RASPBERRY

A very excellent raspberry, grown successfully on this Coast for years, and is one of the parents of Washington, Willamette and Indian Summer. On this Coast it bears two crops a year, like Indian Summer. It is of large size, delicious flavor, with small seeds and very fine texture and is very productive. A little too soft for long distance shipping, but is one of the finest raspberries for jams, jellies and preserving, as well as eating fresh.

LATHAM RED RASPBERRY

This berry is very popular in the East, where it has become a leading variety, and has been liked by commercial growers in California.

(See Prices on Page 19)

ST. REGIS RED RASPBERRY

Also called Ranaree and Ranere

This is a favorite in Central California where it is called Ranaree. It is early and of good quality and yields large, well flavored berries, and is said to continue to produce fruit until frost.

EVANS BLACK RASPBERRY

This is said to be the best blackcap for our conditions, more productive than other varieties, fine flavored, sweet and juicy, not dry and crumbly like most blackcaps here.

MUNGER BLACK RASPBERRY

This blackcap is well adapted to California conditions and has been the main commercial blackcap here for a number of years, with big, juicy berries.

CUMBERLAND BLACK RASPBERRY

The Cumberland blackcap has been declared to be the finest blackcap on the market. According to the bulletin of the California College of Agriculture: "Cumberland is considered the best black raspberry for the Southwest. It has sold well on markets in Southern California. The plant is vigorous and productive but normally yields about 25% less than red varieties. The fruit is large, roundish conical, firm, and of good quality. The season is late and long." Blackcaps bring more money on the market than red raspberries.

SODUS PURPLE RASPBERRY

This new purplecap is extremely large, firm, medium purple in color, sprightly and good in quality. It is said to surpass all others in growth of cane and in production, is extremely vigorous, hardy and drought resistant. It does well in California and is said to be precocious, yielding berries the same year as planted if given good care. It ripens later than Washington and Cuthbert, thus extending the raspberry season.

LOGANBERRY

This berry is large, long and an attractive deep red color. It originated in California and has been grown on this Coast for many years. Although it is somewhat sour it is highly prized for jam and jelly making and for juice, as well as for pies.

(See Prices on Page 19)

A Box of Boysenberries

BOYSENBERRY

This popular berry is very large and very productive and has a sprightly and delicious flavor. In color it is very dark red, almost black when fully ripe, being identical in color with the Youngberry, but larger, more highly flavored and less seedy. It yields over a period of six to eight weeks. It is very highly prized for juice, jam, jelly, canning and quick freezing. It is a week or two later than the Youngberry.

THORNLESS BOYSENBERRY

This variety is a sport from the thorny Boysen and is very productive, although smaller than the thorny Boysen. Being thornless makes it much easier to pick. It starts ripening a week or two earlier than the regular Boysen, about the same time as the Youngberry.

NECTARBERRY

A very fine berry, reported to be a chance seedling, possibly of the Youngberry. It is very similar to the Boysenberry in size and color and productivity, and they are hard to tell apart in the field or the market. Growers say it is fully as large if not slightly larger than Boysen, with a more sprightly flavor, and the berries are said to hang on the vines longer. In California it is said to start ripening a few days later than the Boysen. A grower says she likes the flavor better than Boysen, Nectar being less sour.

(See Prices on Page 19)

THORNLESS LOGANBERRY

Patented

This is a sport of the thorny Logan and is similar to it except that it is absolutely free from thorns, which makes picking so much easier.

Showing, left to right, size of Boysenberry and Blackberries

CAMERON THORNLESS BLACKBERRY

This variety is sold by some nurseries under the name of "Victor Berry". It is of good size, good flavor and immensely productive, the berries under good culture hanging in great clusters. It is said to be firm and a good shipper. The canes are very slender and while it has some thorns, they are extremely fine and not troublesome. Has become quite a commercial berry. Good for canning and quick freezing.

(See Prices on Page 19)

KOSMO BLACKBERRY

The Kosmo originated in Oregon and closely resembles the Mammoth and Cory Thornless, but is reported to yield better than these. A grower in the central part of the state esteems this variety very highly.

YOUNGBERRY

Identical in color with the Boysen but not so large, a little firmer and a week or two earlier. It will make a little more juice than the Boysen.

PARADISE ASPARAGUS

It is said this variety comes into production a year ahead of other varieties, and is more productive and less astringent than ordinary asparagus.

MARY WASHINGTON ASPARAGUS

This is a widely grown variety and in recent years has been the most widely planted variety. It is of good quality, green and rust resistant.

(See Prices on Page 19)

CHERRY RED RHUBARB

Everbearing

A beautiful, red rhubarb which originated in this county and is a direct descendant of Burbank's Crimson Winter Rhubarb. It is of large size and very highly productive, producing a crop within a few months after planting and yielding several crops in a season. It does not go dormant like most varieties, but is everbearing, producing the year around under favorable weather conditions, and a planting will last for years. It is so tender that it does not require peeling, and is well flavored and less acid than some sorts and requires less sugar.

SUPER RHUBARB PIE

One cup sugar, large tablespoonful flour mixed with the sugar, butter the size of an English walnut, one egg. Mix all together, add two cups of finely chopped rhubarb and bake in two crusts. You will find this pie so delicious it will delight your palate. Do not peel the rhubarb. (This recipe is for an 8 inch pie; use more filling for a 10 inch pie.)

(See Prices on Page 19)

THE STRAWBERRY WALL MANUAL

By G. P. Hill

Strawberry wall avoids ground spoilage, outwits birds and conserves space.

Mr. Hill says: "Never have I had much success raising strawberries. As a half-acre farmer I set out my plants with high hopes. Visions of strawberries and cream and delicious shortcake are not to be lightly cast aside when one has the garden space and the opportunity of producing such dainties."

But you know: "The best laid plans of mice and men . . ." First the weeds moved in. When they had been partially overcome, the berries would rot on the wet ground. Then those that were left were selected by the birds for a delightful repast.

Then the strawberry barrel was tried, but "the inadequacy of the barrel for quantity production was immediately apparent. The few plants which the barrel supported produced an amazing quantity of fruit but the capacity was limited and the life of a barrel filled with moist earth is short at best.

"From these experiences and observations was developed the idea of the strawberry wall. This is a permanent structure, or as permanent as cement can make it", not rotting out like a barrel. And it keeps the berries off the wet ground and the birds can't eat them as they find no roosting place.

This manual contains:

1. Full step by step directions for construction.
2. List of the few items of material required . . . no lumber needed.
3. How to mix the soil and fertilizer for filling the wall.
4. How to install simple watering and drainage system.
5. Full instructions for setting the plants and their care.

Plant-Chem Salts

—A Balanced Fertilizer

PLANT-CHEM comes in concentrated dry form for easy handling, and is used in liquid form for better results in starting seeds, cuttings or transplanting and feeding to maturity all kinds of plants, in any kind of soil, in sand or hydroponically.

PLANT-CHEM salts contain PLANT-HORMONE (for better seed germination and to start new feeder roots, cuttings, etc.), also 17 minor elements vital to the life, growth and productivity of plants, all in the properly balanced proportions with NITROGEN, PHOSPHORUS and POTASH, 21 in all. See analysis and directions on every package.

Plants fed with a full nutrient solution containing all the nutritional elements will produce fruits and vegetables containing these nutritional elements, which will greatly increase the health of those eating them. These elements are furnished in PLANT-CHEM.

Oliver Kehrlein, Official Garden Consultant, California Nurserymen's Assn., says: "If all the growers and nurserymen realized how economical Plant-Chem was and that it contained all the necessary elements as well as those growth hormones which would insure them against damping off when germinating, and wilting when transplanting (thus providing better propagation), they'd all give up the old antiquated methods which "were good enough for our grandfathers."

Harry E. Nelson, Div. of Horticulture, San Francisco Junior College, says: "A large number of our gardening classes have used your product during the war with complete success, and are very happy with the results obtained. . . . I hope that more people learn of the benefits to be derived from using complete salts such as Plant-Chem."

F. C. Baker, Ph. D. in Biology and Biochemistry with a minor in Plant Physiology from Cornell, says: "I think your **Plant-Chem Salts** produce by far the best balanced and most stimulating full-nutrient solution that I've ever seen."

AIR FREIGHT

Air freight on plants from Tennessee to Los Angeles is said to be \$13.75 per 100 pounds. Railway express is \$7.94 per 100 pounds. As plants come in a day by air, they can be packed lighter, so the transportation should be little more by air than by rail. And coming so quickly they would arrive in prime condition. This is worthy of your serious consideration.
